

Making Cassandra easier

Conductor is the always-on cloud-native control plane for managed Cassandra.

Integrate with an existing or deploy a new production-ready Cassandra cluster in minutes. You no longer need to worry about performing management tasks such as hardware provisioning, software installing and patching, failure recovery, backups, and monitoring.

FEATURES

ARTIFICIAL INTELLIGENCE

Why not let engineering sleep better? Conductor monitors and operates Cassandra 24 hours a day, 7 days a week.

SELF-HEALING

Let's face it, Cassandra nodes can and do crash.. Conductor will replace these nodes automatically.

CLONE CLUSTERS

Need to spool up a new environment? Conductor spools up a snapshot of your database with a few clicks.

AUTO-SCALING

Conductor will auto-scale your storage capacity automatically and optimally.

Google Cloud Platform

Conductor is

an opinionated solution optimized for performance and value. Supports:

- Kubernetes
- ECS
- On-premise
- Amazon
- Google Cloud
- Azure

Feature rich + affordable:

- Supports Apache and DSE Cassandra
- Automated backups
- Clone clusters in minutes
- Auto-scaling
- Pluggable API

Our many years of expertise and knowledge have been baked into Conductor to simplify and remove the stress of working with Cassandra.

**more
affordable
than the
alternatives**
